

CLOUD MIGRATION

Data Protection In-Flight and at Rest

Navigate Data Protection Effectively in a Multi-Cloud World

Enterprises migrating applications and infrastructure to the cloud face new challenges in protecting workloads dispersed across on-premises, multiple clouds, and endpoints. Too often, the lack of comprehensive visibility of the data environment results in data becoming siloed, fragmented, and even left unprotected. And if that isn't challenging enough, the rising risk of advanced cyberthreats – alongside the traditional threats from bad actors and mismanaged solutions – makes protecting data and ensuring service continuity across these fragmented environments an even more daunting challenge for security, IT, and compliance teams.

To ensure the adoption of hybrid and multi-cloud infrastructures produces results, Commvault partners with Global Systems Integrators (GSIs) to help customers defend data and manage risk.

Hybrid Cloud Security Challenges

Data sprawl across locations raises the risk of data silos and data fragmentation

Poor visibility into data workload protection hampers efficient disaster recovery planning

Underestimated cloud storage costs

Multiple tools and software add complexity and costs

Commvault Makes It Simple to Safeguard the Entire Data Estate

Commvault partners with GSIs to help customers accelerate cloud migration without compromising data security. We unify data protection and recovery in a single console for real-time visibility and early warning of cyber risk. This safeguards production and backup environments so you have less to recover.

Founded on Zero Trust principles to strengthen cyber-resiliency strategies, our solutions provide immutable air-gapped backups with refined controls to protect and recover enterprise data in the way that best suits business requirements today and in the future. Benefits include:

- Establish a single, future-proof data protection platform that scales on-demand
- Employ advanced cyber-deception technology to proactively respond to cyberthreats and contain impact
- Leverage the industry's broadest workload protection for mission-critical, cloud and SaaS apps, mainframes, and containers
- Accelerate digital transformation

Commvault Helps GSI Partners Deliver More Value to Customers*

60%

Reduction in annual exposure to data theft or breaches

50%

Reduction in annual unplanned downtime

78%

Net cost reduction per TB for IT staff data management support

30%

Improvement in average recovery time for VMs
