

DATA SECURITY

# Secure, Resilient Data Protection

## Defend Customer Data and Its Recoverability

As cyber risks evolve, data estates grow, and IT resources shrink, organizations need a better way to safeguard their data in an ever-changing threat landscape. Traditional data protection solutions play a pivotal role in recovering post-attack, but they are reactionary, narrowly focused, and no longer sufficient. With corporate data repositories growing 40% to 50% annually,\* companies cannot afford a piecemeal solution that opens the door to new and advanced threat vectors.

Data protection should meet threats head-on, with proven recoverability for worst-case scenarios. Commvault partners with Global Systems Integrators (GSIs) to establish a proactive approach to identifying risks and defending data. It's data protection that doesn't sit idle in the background, bracing for impact, but anticipates and contains cyberattacks before damage can occur.

## Data Protection Challenges

**Surging cyberthreats** – Cyberthieves are highly motivated, and their ever-evolving attacks on networks and supply chains are organized and sophisticated.

**Growing data estates** – Mission-critical data must be secured in production and backup environments on-premises, in the cloud and across SaaS deployments.

**Reactionary strategies** – Traditional data security focuses on what happens after an attack; that's pivotal for recovery, but insufficient for preventive, proactive protection.

**Shrinking IT resources** – Skilled IT and cybersecurity talent are hard to find, opening the door to risk as threats accelerate and data estates grow.

## Commvault Makes Proactive, Layered Data Protection Simple

Commvault partners with GSIs to deliver the layered protection that is essential to a holistic security strategy. We provide industry-leading data protection with innovative, proactive threat detection that is redefining how customers protect and secure their data.

Unifying data protection on a single console, provides organizations with real-time visibility into cyberthreats, and the tools to prevent damage from cybersecurity incidents—damage that can threaten the business at large. Data protection and recovery work together to ensure mission-critical data is secure, compliant and easily recovered wherever it is needed. Benefits include:

- **Business continuity** – Eliminate downtime and keep business operations running seamlessly.
- **End-to-end observability** – Anticipate risks, eliminate blind spots and maintain visibility before, during and after an attack.
- **Damage prevention** – Surface silent cyberthreats early, in production and storage environments and defend against them.
- **Fast recovery** – Restore cloud-native, SaaS, and on-premises with air-gapped copies to meet the most stringent requirements.
- **Cost savings** – Avoid financial loss, minimize disruption, and meet data compliance standards.
- **Industry's broadest coverage** – Protect mission-critical, cloud and SaaS apps, mainframes, VMs, and containers.

## Commvault Helps GSI Partners Deliver More Value to Customers\*

**60%**

Reduction in annual exposure to data theft or breaches

**50%**

Reduction in annual unplanned downtime

**78%**

Net cost reduction per TB for IT staff data management support

**30%**

Improvement in average recovery time for VMs

## Our Commitment to Protecting Digital Transformation

Together with our Partners, Commvault strengthens customers' cyber-resiliency strategies, speeds adoption of cloud-first data transformation, and reduces the costs of protecting and recovering data in hybrid and multi-cloud environments.

**Gartner**

11th consecutive time: **2022 GARTNER® MAGIC QUADRANT™ LEADER FOR ENTERPRISE BACKUP AND RECOVERY SOLUTIONS**

**FORRESTER**

**A LEADER IN THE FORRESTER WAVE™, DATA RESILIENCE SOLUTIONS SUITE, Q4 2022**
