

Microsoft 365 Data Protection

When native controls are not enough

Commvault provides a single data protection platform to actively defend Microsoft 365 data and meet any long-term retention need for Outlook, SharePoint, OneDrive and Teams data. Metallic DPaaS makes complete protection simple.

SECURE YOUR DATA

Prevent unwanted access and drive compliance with hardened zero trust architecture and built-in security protocols.

DEFEND YOUR DATA

Meet threats head-on with real-time visibility and early warnings that help safeguard production and backup environments.

FASTER RECOVERY

Enable enterprise-wide data recovery across the broadest set of hybrid workloads, with unparalleled agility and speed.

Enterprise-grade, SaaS-delivered data protection:

- ✓ Advanced threat detection technology to actively defend your data
- ✓ Air-gapped, encrypted backups to safeguard all M365 data - beyond standard recycle bin limitations
- ✓ Rapid recovery with point in time and out of place options to minimize downtime
- ✓ Granular search and eDiscovery to meet compliance requirements
- ✓ Flexible storage options to optimize cost and performance

WHY GO BEYOND NATIVE BACKUP TOOLS?

Like many SaaS providers, Microsoft uses a Shared Responsibility Model that ensures high availability of its services but places data protection in the customer's hands. For extended retention and recovery, air-gapped copies are recommended.

"After evaluating various products, only Commvault and Metallic gave us a total solution to fulfill our business demands and compliance rules."

David Ben-Eli, System IT Infrastructure Manager, Harel Insurance
